7.1 Which aspects of the course did you like?

The content of the lecture is interesting.

Mr. Goerke's lectures were okay. The programming exercises in the second half of the lecture were fun.

General introduction to the topic of Robotics and wide presentation of current methods.

I liked the basement that was given before the most advanced topics.

The examples in real life are very good.

practical exercise lecture content

- Lecturers were nicely structured and good to listen to

7.2 What could be improved?

Refferences of the lecture slides should given more clearly.

Give numbers for each blocks of content in the slides. It would be helpful for students to get a whole structure of the slides.

Mr. Behnke's voice makes me sleepy

assignments complexity.

I wish I could have known that a previous course to this existed. (It would have incremented my interest much more than now) but it was my fault not to look.

Sometimes the exercise tasks are not clear, eg. whether task 2 shall use results of task 1. The formulas on the slides should have a legend with what the variables are standing for. This is sometimes missing.

class should be more interesting and active

There should be more practical and programmin exercises to get a better grasp of its applications

- Lecturers pronounciation was a little too german
- the amount of slides is a little high
- slides are not all self-explanatory
