7.1 Which aspects of the course did you like?

Interesting story and great world application in the field of science

very nice stories! (subgraph isomorphism, learning in logic, graph kernels, random graphs)

7.2 What could be improved?

Sometimes, in the exam (I refer to Machine Learning and Data Mining for example), very special aspects from the lecture are asked that didn't seem important during the lecture. But others that seemed important are not asked at all

7.3 You can leave remarks and further feedback here.

Maybe mention that "Data Mining" and "Machine Learning" will greatly help in understanding this lecture

I liked the content of the lecture very much and most of the time, the slides were excellent. only sometimes, I would wish for complete definitions of all terms (but as mentioned, this didn't occur often)
The tutorial was very good but it was a lot of work for Max, so maybe it would be better to hand in the exercises one week before they are discussed in the tutorial such that the tutor can use the students solutions
