## 6 Comprehensive Rating

6.1 Please give an overall rating of the course on a scale from excellent (1) to very poor (6).

## 7 Free Text Comments

7.1 Which aspects of the course did you like?

-> Topics covered

-> Mathematical Formulations.

---

Every aspect

- 
- the professor
  - the contents of the lecture
- 

The good structure of the course and slides. Dr. Horvath explains very well.

---

The topics are very nice.

---

examples and exercises for all algorithms

---

Lecture slides

---

The exercise sheets

---

Actually the topics are nice and presented in a meaningful order

---

## 7.2 What could be improved?

More ECTS should be awarded for the course as much time is spent on it

---

- more practical exercise
  - more latest topic based on current trend
- 

Prof. Wrobel should refine his slides  
They are very superficial and not well formatted

---

The data files for the proper exercise were too long (prosp. took too long)

---

Hard to tell

---

talks a little too slow in lecture

---

Acoustics

---

The slides about subgroup discovery (normally the other slides are well structured and understandable, but the slides of this particular topic were not)

---

- Slides
- 

A working mic would be nice. Sometimes hard to follow b/c not loud enough

---

Dr. Horvath should work on using filler words like "Ähm" less.  
Makes the lecture harder to follow

7.3 You can leave remarks and further feedback here.

Contents are too much for a 6 credit points lecture.

---

Nothing more
